

Performax Tractor Inspections

Recommended Annually

Tractor Inspections are an important and inexpensive way to protect your investment and prevent crucial down-time. Our JD Certified technicians have the knowledge, special tools, and diagnostic equipment needed to analyze the highly computerized engines, transmissions, hydraulic and electrical systems used on today's equipment.

Years ago, a tractor inspection may have consisted of little more than a mechanic hooking your tractor to a dynamometer to check the horsepower and walking around with a clipboard while visually inspecting the tractor for oil leaks, loose belts, and suspicious wear.

Today, every Performax Inspection begins with engine and hydraulic oil samples drawn and sent to a laboratory for a scan analysis. A detailed report is generated with one copy sent to us and the other directly to you. The technician then goes through a 100-plus point checklist, with the aid of a laptop computer and other diagnostic equipment to check for any potential problems. A report is generated so that you and the service manager can discuss any recommended repairs. Standard Performax Inspections are priced as follows:

Utility Tractors.....	\$199.
Row Crop Wheel & Track Tractors	\$399.
4WD Wheel & Track Tractors.....	\$399.
